

Low-Latitude Window: Supportable Mass

Representative points from $\theta_{\oplus}$ to 1° (log scale)

Interpretation

$\theta_{\oplus}$ Earth angular radius ($\sim 0.00244^{\circ}$)

0.1° Entry-level low-latitude regime

0.5° Still highly permissive

1.0° Meaningful but tighter benchmark

Trend $\sigma_{\text{max}} \propto 1/\sin(\phi) \approx 1/\phi$ for small ϕ

Representative ideal values

$\theta_{\oplus}$: 13.83 kg/m²

0.1° : 337.4 g/m²

0.5° : 67.5 g/m²

1° : 33.7 g/m²

$\theta_{\oplus}$ offset ≈ 1 Earth radius at 1 AU
