

Earth-Synchronous Orbit Radius

Orbit radius to achieve 1-year period with light pressure assist.

Synchronous orbit radius [AU]

Reading the curve

- 0.1° → 0.9985 AU
- 0.5° → 0.9924 AU
- 1.0° → 0.9847 AU
- Light pressure reduces effective gravity
- Orbit moves slightly inward for 1-year period
- Change is small: < 2% even at 1°
- σ_{max} curve remains unchanged

$$r_{\text{sync}} = 1 \text{ AU} \times (1 - \beta)^{1/3}$$
